ABSTRACT:

A composition and therapeutic kit includes an aerosol packaging assembly including a container accommodating a pressurized product and an outlet capable of releasing a foamable composition, including a steroid as a foam. The pressurized product includes a foamable composition including: a container accommodating a pressurized product; and an outlet capable of releasing the pressurized product as a foam; wherein the pressurized product comprises a foamable composition including: i. a steroid; ii. at least one organic carrier selected from the group consisting of a hydrophobic organic carrier, a polar solvent, an emollient and mixts. thereof, at a concentration of about 2% to about 50% by weight; iii. a surface-active agent; iv. about 0.01% to about 5% by weight of at least one polymeric additive selected from the group consisting of a bioadhesive agent, a gelling agent, a film forming agent and a phase change agent; v. water; and vi. liquefied or compressed gas propellant at a concentration of about 3% to about 25% by weight of the total composition. The composition further may include a therapeutically active foam adjuvant, selected from the group consisting of a fatty alc., a fatty acid, a hydroxyl fatty acid; and mixts. thereof. A composition contained hydrocortisone propionate, mineral oil, iso-Pr myristate, glyceryl monostearate, stearyl alc. Xanthan gum, Methocel K100M, Polysorbate 80, PEG-40 stearate, di-Na EDTA, preservative, propellant, and water.
